

## About Me

*I am an aspiring developer currently in my first professional role as a .NET Trainee Developer, where I've gained experience in API development, database integration and management, and cloud deployment through Azure. As part of my responsibilities, I have implemented CI/CD pipelines in Azure to automate and optimize the deployment workflow.*

*I have earned my Azure AZ-900 certification to deepen my understanding of cloud technologies and add value in modern development and deployment environments.*

*Before joining the tech world, I worked for seven years as a dog trainer, and in the last year, I also taught in this field. Thanks to this experience, I developed essential skills for teamwork, effective communication, and problem-solving, which I now apply in my role as a developer.*
